

Supported Endpoints and Protocols

Summary

Jitterbit integrates SaaS applications and on-premises applications, and co-exists with your existing ETL, EAI, and ESB investments. Jitterbit also provides a wide range of standards-based connectors that enable you to integrate applications with common data repositories.

TIP: The Jitterbit team is constantly building connections to new applications; if you don't see your application, [contact us](#).

Connected Endpoints

- ADP
- Advancement (Ellucian)
- Amazon Elastic Compute Cloud (EC2)
- Amazon S3
