

10.1

10.1.1 Harmony Release

Harmony Portal

Released May 15, 16, and 20, 2019

The 10.1.1 release date was by region:

- **APAC:** Released May 15, 2019
- **EMEA:** Released May 16, 2019
- **NA:** Released May 20, 2019

Included in this release were updates to the [Harmony Portal](#) and its applications.

New Features

Cloud Studio

- **New Smartsheet connector**
A new [Cloud Studio connector](#) for Smartsheet is now available to use with agents version 10.1 or higher. The new connector can be accessed on the right side of the project designer from the design component palette.
- **New option to test an email notification**
When [configuring an email notification](#), a new **Test** button is now available to confirm your configuration is working properly by sending a test email.

Enhancements

Cloud Studio

- **New option to retry a failed operation**
If an operation fails with an error related to file dependencies, this issue may be resolved by resyncing the project between the agent and Harmony. In this scenario, a new **Try Again** button appears [within the operation log](#) to resync and retry the operation. Note that a 10.1 agent or higher is required for the operation retry to work.

Fixes

Harmony Portal

- **Cloud Studio documentation link now works**
After logging in to the Harmony Portal, the landing page **Support & Learning** link to **Getting Started Cloud Studio** now directs you to the correct location for the [Cloud Studio Quick Start Guide](#) at [Jitterbit Success Central](#). See all Cloud Studio docs under the [Cloud Studio](#) section.

Management Console

- **All Cloud Studio operations are now reflected on the Projects page**
All operations that have been deployed within Cloud Studio are now displayed within the Management Console [Projects](#) page. Previously, Cloud Studio operations that had debug mode enabled were not appearing.

Cloud Studio

- **Transformation export link now persists**
After reopening an existing transformation without making changes, the link to [export the mapping](#) is now present. Previously, the export link was displayed only after making changes to the mapping.
- **Reuse of file-based schemas from imported Cloud Studio projects now works**
When defining a sample file schema [in an activity](#) or [in a transformation](#), you can now successfully use a saved schema that was loaded from an [imported Cloud Studio project](#). Previously, an error would occur upon selecting the saved file.
- **Hyphens in JSON property names are now supported**
New JSON schemas created by uploading a URL or file or by manually entering the schema, where the schema also uses hyphens in node or field names, no longer cause operations to fail at runtime. Note that existing schemas created this way are not affected by this fix; however, you can delete the existing schema and recreate it in the same project to resolve this issue.

- **Jira connector: Post issues activity now works properly**
When using the [Jira connector](#) with a [Jira post issues activity](#) to set issue priority, the request no longer results in an error and the priority is set correctly. This fix requires the use of an agent version 10.1 or higher.

10.1 Harmony Release

Harmony Portal, Design Studio, Private API Gateway, Private Agents, and Sandbox Cloud Agent Group Released May 1, 2, and 6, 2019

The 10.1 release date for the listed components was by region:

- **APAC:** Released May 1, 2019
- **EMEA:** Released May 2, 2019
- **NA:** Released May 6, 2019

Included in this release were updates to these Harmony components:

- [Harmony Portal](#) and its applications
- [Design Studio](#)
- [Private API Gateway](#)
- [Private Agents](#)
- [Sandbox Cloud Agent Group](#)

Design Studio, Private Agent, and Private API Gateway installers are available as of May 6, 2019.

New Features

Agents

- **New Cloud Studio connectors**
New [Cloud Studio connectors](#) for Evernote, Google Drive, HubSpot, Magento, and SugarCRM are now available to use with agents version 10.1 or higher. The new connectors can be accessed on the right side of the project designer from the design component palette.

Changes

Agents

- **The Cloud Studio Cherwell connector no longer works with 10.0 agents**
A change made to the [Cherwell connector](#) in Cloud Studio means it is no longer compatible with 10.0 agents. If using the Cherwell connector, please upgrade to 10.1 agents.

Enhancements

API Manager

- **Private API Gateway proxy API calls are now logged**
Proxy API calls made through a [Private API Gateway](#) are now displayed within the [API Logs](#) page of the [API Manager](#), as they are for custom API calls.

Private API Gateway

- **Private API Gateway installation improvements**
The [Private API Gateway](#) installer has been improved to allow for DNS configuration and self-testing to ensure that the gateway is functioning properly and is able to connect to the Harmony platform. In addition, you can now use the `--help` command to access a basic overview.

Fixes

Agents

- **The `sendEmail()` function now supports multi-byte characters**
The Jitterbit Script function `sendEmail()` in [Cloud Studio](#) or [Design Studio](#) can now be used to send emails containing multi-byte characters.

API Manager

- [8.22](#)
- [8.21.0](#)
- [8.20.0](#)
- [8.19.0](#)
- [Winter 2017](#)
 - [8.18.10](#)
 - [8.18.0](#)
 - [8.17.0](#)
 - [8.16.0](#)
 - [8.15.0](#)
 - [8.14.0](#)
- [Summer 2016](#)
 - [8.12.0](#)
 - [8.11.0](#)
 - [8.10.0](#)
 - [8.9.0](#)
 - [8.8.1](#)
 - [8.8.0](#)
 - [8.7.1](#)
 - [8.7.0](#)
 - [8.6.1](#)
 - [8.6.0](#)

Last updated: Jun 12, 2019

- **APIs can now be tested without CORS being enabled**
When accessing the [Portal Manager](#) or Portal pages of the [API Manager](#), you can now execute custom APIs regardless of the CORS setting. Previously, execution required CORS to be enabled.

Cloud Studio

- **Connector Builder can now be used with previously incompatible HTTPS endpoints**
[Connector Builder](#) connectors used with certain HTTPS (SSL/TLS) endpoints no longer result in an error during testing of the connection or at operation runtime. Error reporting has been improved to better describe any errors.
- **Connector Builder now respects Private Agent proxy settings**
Connector Builder now uses any proxy settings that you have [configured on a Private Agent](#), instead of executing on the agent without using the proxy.
- **Deleted project components no longer remain after they have been deleted**
Upon deleting project components in an already-deployed project and then redeploying the project, the deleted components are now permanently deleted. Previously, if you re-deployed a project where components such as operations, schedules, or applied plugins had been deleted, those components would remain in the deployed project.
- **Configurable deploy now automatically selects all required components**
When deploying any part of a project using a configurable deploy, all component dependencies are now automatically selected by default. Previously, only operations and their steps were automatically selected, without required components such as connections, files, or variables.
- **Invalid Salesforce bulk operations are now prevented from being deployed**
Attempting to deploy an invalid transformation containing both a [Salesforce bulk activity](#) and a transformation now results in an [operation validation error](#). Mapping capabilities are provided directly within Salesforce bulk activity configuration in lieu of using a transformation.
- **Reusing custom schemas in activities now works properly**
When reusing an existing custom schema by selecting the saved schema from the [activity configuration screen](#), the schema now works properly in a transformation. Previously, the operation would fail at runtime.
