

Jitterpak Template Library

Jitterbit Harmony Advanced Resources

Overview

Looking for example projects to help you get started? A Jitterpak (.JPK format) contains a snapshot of a [Design Studio](#) project at the moment it was saved. These snapshots can be used as examples or samples that you can reference or use as a starting point.

This library contains a collection of various Jitterpaks that are available to use for reference when creating your own Design Studio projects. See [Import a Jitterpak](#) for how to load the Jitterpaks provided here. You can also create your own at [Export as a Jitterpak](#).

CAUTION: These Jitterpak templates are able to be used with [Design Studio](#) only. They are not able to be loaded into [Cloud Studio](#).

Citizen Integrator Jitterpaks

These Jitterpaks were exported from [Citizen Integrator](#) recipes and are supported as templates. More than 500 Jitterpaks across 40 endpoints are available. Browse all Jitterpaks at [Citizen Integrator Jitterpaks](#) or select an endpoint from the list below to view and download the Jitterpaks for the specific endpoint.

To use recipes directly in Citizen Integrator, log in to the [Harmony Portal](#) and select **Citizen Integrator**. Documentation is available under [Citizen Integrator](#).
