

Jitterbit Connect Wizards

Jitterbit Harmony Design Studio

Jitterbit Connect Wizards

Overview

Jitterbit Connect™ provides a fast, easy route to data transformation. This is made possible through a wizard-based integration tool built directly into Jitterbit. The wizard creates all of the complex, detailed operations and components of a Transformation project. By stepping through the wizard, you can create an integration project without the need for coding.

Two types of wizards are available:

- The Jitterbit Connect [Salesforce Wizards](#) supports bi-directional data, including both queries and upserts. The Salesforce wizards are based on the easy-to-use wizards in Jitterbit Data Loader for Salesforce. The Salesforce wizard provides the option to create a Salesforce connection directly in the Jitterbit application.
- The Jitterbit Connect [Standard Wizards](#) step you through the creation of common data transformations for text files, XML files, and databases.
